

Power of Reliability - take control of your bills by using solar panels.

Go Green with Natural Technology Systems, a company that has been providing South Australia with premium solar installations since 1984, company director Kim Atkinson says.

"Our company is 100 per cent Adelaide family owned and our experience is second to none when it comes to designing a solar system to suit all your needs," he said.

"Whether it is for camping, off road vehicles, properties wanting to offset skyrocketing power bills, Natural Technology Systems can design a premium system to suit your needs."

The company's showroom at 120 Prospect Road, Prospect, displays a wide range of Exide deep cycle batteries, solar regulators, inverters for all needs, wind turbines and a wide range of small 12 volt modules ranging from 10 watt to 130 watt, and 24 volt modules up to 195 watt with junction boxes for battery charging (the normal modules offered in solar grid systems are not suitable for battery charging).

Kim says Natural Technology Systems can help you take control of your electricity costs.

"The State Government's new feed-in tariff scheme will pay consumers 16 cents per kW plus an additional 9.8 cents per kW from your electricity retailer from the July 1, 2012," he said.

"This tariff will allow you to take control of your electricity costs and limit the effect of coming price rises to your power bills. This is now more viable for commercial businesses with power usage during sunlight hours."

Natural Technology Systems offer two modules in their Grid Pro Kits, Q-Cell and Trina Solar. Q-Cell is a German manufactured module and the best performer at the Desert Knowledge Research Centre, Alice Springs, NT. To complement this they offer a premium Chinese manufactured module, Trina Solar.

They include in both of their grid pro kits a SMA German manufactured inverter, including a 10 year warranty.

"At Natural Technology Systems we only use proven, premium products with real warranties to cover you into the future," said Kim.

"On top of the industry leading warranties we offer a five-year warranty on our installation work," he said.

"We are the first port of call if you have any problems with your system.

"Furthermore, we have been in business longer than the warranties that we offer."

Natural Technology Systems' professional staff will give you accurate and truthful information on your requirements for your solar system for your house or property.
