

All Bases Covered - Solar System firm a ray of sunshine for SA

There are three main factors to consider when purchasing a solar system for your home, says Kim Atkinson, director of Natural Technology Systems.

“These factors include a solid branded panel and inverter manufacturer with great performance and warranty support; a reputable and trustworthy retailer who has experience in solar and is going to be around in the future for support; and an experienced, established, accredited installer who is going to look after you through your warranty periods,” he says.

Kim says Natural Technology Systems has all three factors covered. “Whether it is for camping, off-road vehicles, isolated properties or residential and commercial properties, we can design a premium system to suit your needs,” he says.

The company is offering great prices for winter 2012 on Premium Tier 1 solar grid connected systems, says Kim.

“We offer two modules in our Grid Pro Kits: Q-Cell and Trina solar,” he says.

“Q-Cell is a German manufactured module and the best performer at the Desert Knowledge Research Centre, Alice Springs, NT.

”To complement this we offer a premium Chinese-manufactured module, Trina Solar. We include in both of our Grid Pro kits a SMA German-manufactured inverter, including a 10-year warranty.”
